NOTES	15

Highlights*

- The population age 65 and over numbered 44.7 million in 2013, an increase of 8.8 million or 24.7% since 2003.
- Between 2003 and 2013 the population age 60 and over increased 30.7% from 48.1 million to 62.8 million.
- The number of Americans aged 45-64 – who will reach 65 over the next two decades – increased by 20.7% between 2003 and 2013.
- About one in every seven, or 14.1%, of the population is an older American.
- Persons reaching age 65 have an average life expectancy of an additional 19.3 years (20.5 years for females and 17.9 years for males).
- There were 67,347 persons aged 100 or more in 2013 (0.15% of the total 65+ population).
- Older women outnumber older men at 25.1 million older women to 19.6 million older men.
- In 2013, 21.2% of persons 65+ were members of racial or ethnic minority populations--8.6% were African-Americans (not Hispanic), 3.9% were Asian or Pacific Islander (not Hispanic), 0.5% were Native American (not Hispanic), 0.1% were Native Hawaiian/Pacific Islander, (not Hispanic), and 0.7% of persons 65+ identified themselves as being of two or more races. Persons of Hispanic origin (who may be of any race) represented 7.5% of the older population.
- Older men were much more likely to be married than older women---72% of men, 46% of women - (Figure 2). In 2014, 35% older women were widows.
- About 28% (12.5 million) of noninstitutionalized older persons live alone (8.8 million women, 3.8 million men).
- Almost half of older women (46%) age 75+ live alone.
- In 2013, about 536,000 grandparents aged 65 or more had the primary responsibility for their grandchildren who lived with them.
- The population 65 and over has increased from 35.9 million in 2003 to 44.7 million in 2013 (a 24.7% increase) and is projected to more than double to 98 million in 2060.
- The 85+ population is projected to triple from 6 million in 2013 to 14.6 million in 2040.
- Racial and ethnic minority populations have increased from 6.3 million in 2003 (17.5% of the older adults population) to 9.5 million in 2013 (21.2% of the older adults) and are projected to increase to 21.1 million in 2030 (28.5% of the older adults).
- The median income of older persons in 2013 was \$29,327 for males and \$16,301 for females. Median money income (after adjusting for inflation) of all households headed by older people rose by 3.7% (which was statistically significant) between 2012 and 2013. Households containing families headed by persons 65+ reported a median income in 2013 of \$51,486
- The major sources of income as reported by older persons in 2012 were Social Security (reported by 86% of older persons), income from assets (reported by 51%), private pensions (reported by 27%), government employee pensions (reported by 14%), and earnings (reported by 28%).
- Social Security constituted 90% or more of the income received by 36% of beneficiaries in 2012 (22% of married couples and 47% of non-married beneficiaries).
- Over 4.2 million older adults persons (9.5%) were below the poverty level in 2013. This poverty rate is statistically different from the poverty rate in 2012 (9.1%). In 2011, the U.S. Census Bureau also released a new Supplemental Poverty Measure (SPM) which takes into account regional variations in the livings costs, non-cash benefits received, and non-discretionary expenditures but does not replace the official poverty measure. In 2013, the SPM shows a poverty level for older persons of 14.6% (more than 5 percentage points higher than the official rate of 9.5%). This increase is mainly due to including medical out-of-pocket expenses in the poverty calculations.

*Principal sources of data for the Profile are the U.S. Census Bureau, the National Center for Health Statistics, and the Bureau of Labor Statistics. The Profile incorporates the latest data available but not all items are updated on an annual basis.

The Older Population

The population age 65 years or older numbered 44.7 million in 2013 (the most recent year for which data are available). They represented 14.1% of the U.S. population, about one in every seven Americans. The number of older Americans increased by 8.8 million or 24.7% since 2003, compared to an increase of 6.8% for the under-65 population.

Between 2003 and 2013, the number of Americans aged 45-64 (who will reach 65 over the next two decades) increased by 20.7% and the number of Americans age 60 and over increased by 30.7% from 48.1 million to 62.8 million.

In 2013, there were 25.1 million older women and 19.6 million older men, or a sex ratio of 128.1 women for every 100 men. At age 85 and over, this ratio increases to 195.9 women for every 100 men.

Since 1900, the percentage of Americans 65+ has more than tripled (from 4.1% in 1900 to 14.1% in 2013), and the number has increased over thirteen times (from 3.1 million to 44.7 million). The older population itself is increasingly older. In 2013, the 65-74 age group (25.2 million) was more than 10 times larger than in 1900; the 75-84 group (13.4 million) increased by 70 percent and the 85+ group (6 million) was 49 times larger.

In 2013, persons reaching age 65 had an average life expectancy of an additional 19.3 years (20.5 years for females and 17.9 years for males). A child born in 2013 could expect to live 78.8 years, about 30 years longer than a child born in 1900. Much of this increase occurred because of reduced death rates for children and young adults. However, the period of 1990-2007 also has seen reduced death rates for the population aged 65-84, especially for men – by 41.6% for men aged 65-74 and by 29.5% for men aged 75-84. Life expectancy at age 65 increased by only 2.5 years between 1900 and 1960, but has increased by 4.2 years from 1960 to 2007. Nonetheless, some research has raised concerns about future increases in life expectancy in the US compared to other high-income countries, primarily due to past smoking and current obesity levels, especially for women age 50 and over.

About 3.4 million persons celebrated their 65th birthday in 2013. Census estimates showed an annual net increase between 2012 and 2013 of 1.6 million in the number of persons 65 and over.

Between 1980 and 2013, the centenarian population experienced a larger percentage increase than did the total population. There were 67,347 persons aged 100 or more in 2013 (0.15% of the total 65+ population). This is more than double the 1980 figure of 32,194.

Explaining Divergent Levels of Longevity in High-Income Countries. Panel on Understanding Divergent Trends in Longevity in High-Income Countries, 2011.

Future Growth

The older population will continue to grow significantly in the future (Figure 1). This growth slowed somewhat during the 1990's because of the relatively small number of babies born during the Great Depression of the 1930's. But the older population is beginning to burgeon as the "baby boom" generation begins to reach age 65.

The population 65 and over has increased from 35.9 million in 2003 to 44.7 million in 2013 (a 24.7% increase) and is projected to more than double to 98 million in 2060. By 2040, there will be about 82.3 million older persons, over twice their number in 2000. People 65+ represented 14.1% of the population in the year 2013 but are expected to grow to be 21.7% of the population by 2040. The 85+ population is projected to triple from 6 million in 2013 to 14.6 million in 2040.

Racial and ethnic minority populations have increased from 6.3 million in 2003 (17.5% of the older adults population) to 9.5 million in 2013 (21.2% of the older adults) and are projected to increase to 21.1 million in 2030 (28.5% of the older adults). Between 2013 and 2030, the white (not Hispanic) population 65+ is projected to increase by 50% compared with 123% for older racial and ethnic minority populations, including Hispanics (153%), African-Americans (not Hispanic) (99%), American Indian and Native Alaskans (not Hispanic) (104%), and Asians (not Hispanic) (121%).

Marital Status

In 2014, older men were much more likely to be married than older women--72% of men, 46% of women (Figure 2). Widows accounted for 35% of all older women in 2014. There were more than three times as many widows (8.7 million) as widowers (2.3 million).

Divorced and separated (including married/spouse absent) older persons represented only 14% of all older persons in 2014. However, this percentage has increased since 1980, when approximately 5.3% of the older population were divorced or separated/spouse absent.

Figure 2: Marital Status of Persons 65+, 2014

Source: U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplement, Table A1. Marital Status of People 15 Years and Over, by Age, Sex, Personal Earnings, Race, and Hispanic Origin, 2014. Internet data release January 2015.

Living Arrangements

Over half (57%) the older noninstitutionalized persons lived with their spouse in 2014. Approximately 14.2 million or 72% of older men, and 11.3 million or 46% of older women, lived with their spouse (Figure 3). The proportion living with their spouse decreased with age, especially for women. Only 32% of women 75+ years old lived with a spouse.

About 28% (12.5 million) of all noninstitutionalized older persons in 2014 lived alone (8.8 million women, 3.8 million men). They represented 35% of older women and 19% of older men. The proportion living alone increases with advanced age. Among women aged 75 and over, for example, almost half (46%) lived alone.

In 2013, a total of about 2.2 million older people lived in a household with a grandchild present. About 536,000 of these grandparents over 65 years old were the persons with primary responsibility for their grandchildren who lived with them.

A relatively small number (1.5 million) and percentage (3.4%) of the 65+ population in 2013 lived in institutional settings such as nursing homes (1.3 million). However, the percentage increases dramatically with age, ranging (in 2013) from 1% for persons 65-74 years to 3% for persons 75-84 years and 10% for persons 85+.

Figure 3: Living Arrangements of Persons 65+: 2014

Source: U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplement.

Sources: U.S. Census Bureau, American Community Survey; Current Population Survey, Annual Social and Economic Supplement.

Racial and Ethnic Composition

In 2013, 21.2% of persons 65+ were members of racial or ethnic minority populations—8.6% were African-Americans (not Hispanic), 3.9% were Asian or Pacific Islander (not Hispanic), 0.5% were Native American (not Hispanic), 0.1% were Native Hawaiian/Pacific Islander, (not Hispanic), and 0.7% of persons 65+ identified themselves as being of two or more races. Persons of Hispanic origin (who may be of any race) represented 7.5% of the older population.

Only 8% of all the people who were members of racial and ethnic minority populations were 65+ in 2013 compared with 17.8% of non-Hispanic whites. The percentage of people age 65 and over within each racial and ethnic minority group are as follows: 9.8% of African-Americans (not Hispanic), 10.7% of Asians (not Hispanic), 7.4% of Native Hawaiian and Other Pacific Islanders (not Hispanic), 9.4% of American Indian and Native Alaskans (not Hispanic) and 6.2% of Hispanics.

Source: U.S. Census Bureau, Population Division, Annual Estimates of the Resident Population by Sex, Age, Race Alone or in Combination, and Hispanic Origin for the United States and States: April 1, 2010 to July 1, 2013. Release Date: June 2014.

Geographic Distribution

The proportion of older persons in the population varies considerably by state with some states experiencing much greater growth in their older populations (Figures 4 and 5). In 2013, over half (61%) of persons 65+ lived in 13 states: California (4.8 million); Florida (3.6 million); Texas (3.0 million); New York (2.8 million); Pennsylvania (2.1 million); and Ohio, Illinois, Michigan, North Carolina, New Jersey, Georgia, Virginia, and Arizona each had well over 1 million (Figure 6).

Persons 65+ constituted approximately 15% or more of the total population in 19 states in 2013: Florida (18.7%); Maine (17.7%); West Virginia (17.3%); Pennsylvania (16.4%); Vermont (16.4%); Montana (16.2%); Delaware (15.9%); Hawaii (15.6%); Iowa (15.6%); Rhode Island (15.5%); Oregon (15.5%); Arizona (15.4%); Arkansas (15.4%); New Hampshire (15.4%); South Carolina (15.2%); Connecticut (15.2%); Ohio (15.1%); Michigan (15.0%) and Missouri (15.0%).

In 20 states, the 65+ population increased by 30% or more between 2003 and 2013: Alaska (61.7%); Nevada (50.7%); Colorado (46.8%); Georgia (44.4%); Arizona (43.2%); Idaho (43.1%); South Carolina (43.1%); Utah (40%), Washington (38.2%); North Carolina (38.1%); Delaware (37.8%); Texas (36.7%); New Mexico (36.2%); Oregon (33.7%); Virginia (33.3%); New Hampshire (33%); Montana (31.5%); Tennessee (31%); Wyoming (30.5%); and Hawaii (30.3%).

The 15 jurisdictions with poverty rates at or over 10% for older adults during 2013 were: District of Columbia (17.5%); Mississippi (14.7%); Louisiana (12.7%); New Mexico (11.7%); New York (11.6%); Kentucky (11.2%); Texas (11%); Florida (10.7%); Georgia (10.7%); Alabama (10.6%); Arkansas (10.5%); California (10.4%); South Carolina (10.2%); South Dakota (10.1%); and North Carolina (10.0%).

Most persons 65+ lived in metropolitan areas in 2013 (81%). About 54% of these older persons lived outside principal cities and 27% lived inside principal cities. Also, 19% of older persons lived outside of metropolitan areas. The older adults are less likely to change residence than other age groups. From 2013 to 2014, only 3% of older persons moved as opposed to 13% of the under 65 population. Most older movers (60%) stayed in the same county and 81% remained in the same state. Only 19% of the movers moved from out-of-state or abroad.

Sources: Administration for Community Living, agid.acl.gov. Data Source: Population Estimates, accessed March 24, 2015. U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplement; Population Estimates; and American Community Survey.

Income

The median income of older persons in 2013 was \$29,327 for males and \$16,301 for females. From 2012 to 2013, median money income (after adjusting for inflation) of all households headed by older people rose 3.7% which was statistically significant. Households containing families headed by persons 65+ reported a median income in 2013 of \$51,486 (\$53,821 for non-Hispanic Whites, \$35,981 for Hispanics, \$41,336 for African-Americans, and \$53,179 for Asians). About 6% of family households with an older adults householder had incomes less than \$15,000 and 70% had incomes of \$35,000 or more (Figure 7).

Figure 7: Percent Distribution by Income: 2013

Note: Percentages may not add to 100 due to rounding.

Source: U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplement.

For all older persons reporting income in 2013 (42.9 million), 17% reported less than \$10,000 and 43% reported \$25,000 or more. The median income reported was \$21,225.

The major sources of income as reported by older persons in 2012 were Social Security (reported by 86% of older persons), income from assets (reported by 51%), private pensions (reported by 27%), government employee pensions (reported by 14%), and earnings (reported by 28%). In 2012, Social Security benefits accounted for 35% of the aggregate income¹ of the older population. The bulk of the remainder consisted of earnings (34%), asset income (11%), and pensions (17%). Social Security constituted 90% or more of the income received by 36% of beneficiaries (22% of married couples and 47% of non-married beneficiaries).

Selected Characteristics of People 15 Years Old and Over by Total Money Income in 2013, Work Experience in 2013, Race, Hispanic Origin, and Sex; and DeNavas-Walt, Carmen and Bernadette D. Proctor, U.S. Census Bureau, Current Population Reports, P60-249, Income and Poverty in the United States: 2013, U.S. Government Printing Office, Washington, DC, 2014. Social Security Administration, "Fast Facts and Figures About Social Security, 2014."

Poverty

Over 4.2 million older adults persons (9.5%) were below the poverty level in 2013.² This poverty rate is statistically different from the poverty rate in 2012 (9.1%). Another 2.5 million or 5.6% of the older adults were classified as "near-poor" (income between the poverty level and 125% of this level).

Just over 2.5 million older Whites (alone not Hispanic) (7.4%) were poor in 2013, compared to 17.6% of older adults African-Americans (alone), 13.6% of Asians (alone), and 19.8% of older adults Hispanics (any race). Higher than average poverty rates were found in 2013 for older persons who lived inside principal cities (12.9%) and in the South (11%).

Older women had a higher poverty rate (11.6%) than older men (6.8%) in 2013. Older persons living alone were much more likely to be poor (16.7%) than were older persons living with families (6.2%). The highest poverty rates were experienced among older Hispanic women (45.4%) who lived alone.

In 2011, the U.S. Census Bureau released a new Supplemental Poverty Measure (SPM). The SPM methodology shows a significantly higher number of older persons below poverty than is shown by the official poverty measure. For persons 65 and older this poverty measure shows a poverty level of 14.6% in 2013 (more than 5 percentage points higher than the official rate of 9.5%). Unlike the official poverty rate, the SPM takes into account regional variations in the cost of housing etc. and, even more significantly, the impact of both non-cash benefits received (e.g., SNAP/food stamps, low income tax credits, WIC, etc.) and non-discretionary expenditures including medical out-of-pocket (MOOP) expenses. For persons 65 and over, MOOP was the major source of the significant differences between these measures. Bear in mind that the SPM does not replace the official poverty measure.

Sources: U.S. Census Bureau, Current Population Survey, Annual Social and Economic Supplement; POV01: Age and Sex of All People, Family Members and Unrelated Individuals Iterated by Income-to-Poverty Ratio and Race: 2013; POV40: Age, Sex, Household Relationship, by Region and Residence -- Ratio of Income to Poverty Level: 2013 "Income and Poverty in the United States: 2013," P60-249, issued September, 2014; Poverty Thresholds for 2013 by Size of Family and Number of Related Children Under 18 Years; and "The Supplemental Poverty Measure: 2013," P60-251, issued October 2014.

¹ Aggregate income refers to the total income of couples and nonmarried persons aged 65 or older.

² The poverty threshold in 2013 was \$11,173 for householders age 65 and over living alone and \$14,095 for householders age 65 and older living with one other person.

Housing

Of the 26.8 million households headed by older persons in 2013, 81% were owners and 19% were renters. The median family income of older homeowners was \$34,500. The median family income of older renters was \$17,300. In 2013, almost 45% of older householders spent more than one-fourth of their income on housing costs - 39% for owners and 69% for renters - as compared to 45% of all householders.

For older homeowners in 2013, the median construction year was 1972 compared with 1976 for all homeowners. Among the homes owned by people age 65 and older, 2.7% had moderate to severe problems with plumbing, heating, electric, kitchen, and/or upkeep. In 2013, the median value of homes owned by older persons was \$150,000 (with a median purchase price of \$63,900) compared to a median home value of \$160,000 for all homeowners. About 65% of older homeowners in 2013 owned their homes free and clear.

Employment

In 2014, 8.4 million (18.6 %) Americans age 65 and over were in the labor force (working or actively seeking work), including 4.6 million men (23%) and 3.8 million women (15.1%). They constituted 5% of the U.S. labor force. About 5% were unemployed. Labor force participation of men 65+ decreased steadily from 63.1% in 1900 to 15.8% in 1985; then stayed at 16%-18% until 2002; and has been increasing since then to over 20%. The participation rate for women 65+ rose slightly from 8.3% in 1900 to 10.9% in 1956, fell to 7.3% in 1985, and then stayed at 8%-9% during the 1990s. Beginning in 2000, labor force participation of older women started to gradually rise from 9.7% to the 2014 level. This increase is especially noticeable among the population aged 65-69.

Education

The educational level of the older population is increasing. Between 1970 and 2014, the percentage of older persons who had completed high school rose from 28% to 84%. About 26% in 2014 had a bachelor's degree or higher. The percentage who had completed high school varied considerably by race and ethnic origin in 2014: 88% of Whites (not Hispanic), 76% of Asians (not Hispanic), 74% of African-Americans (not Hispanic), 76% of American Indian/Alaska Natives (not Hispanic), and 54% of Hispanics. The increase in educational levels is also evident within these groups. In 1970, only 30% of older Whites and 9% of older African-Americans were high school graduates.

Health and Health Care

In 2011-2013, 43% of noninstitutionalized people age 65 and over assessed their health as excellent or very good (compared to 55% for persons aged 45-64 years). There was little difference between the sexes on this measure, but older African-Americans (not Hispanic) (27%), older American Indians/Alaska Natives (28%), older Asians (33%), and older Hispanics (30%) were less likely to rate their health as excellent or very good than were older Whites (not Hispanic) (47%). Most older persons have at least one chronic condition and many have multiple conditions. In 2011-2013, the most frequently occurring conditions among older persons were: diagnosed arthritis (49%), all types of heart disease (31%), any cancer (25%), diagnosed diabetes (21% in 2009-2012), and hypertension (high blood pressure or taking antihypertensive medication) (71 percent in 2009-2012).

In January-June 2014, 71% of people age 65 and over reported that they received an influenza vaccination during the past 12 months and 61% reported that they had ever received a pneumococcal vaccination. About 29% (of persons 60+) reported height/weight combinations that placed them among the obese. Slightly over 41% of persons aged 65-74 and 27% of persons 75+ reported that they engaged in regular leisure-time physical activity. Only 9% reported that they are current smokers and 7% reported excessive alcohol consumption. Only 2% reported that they had experienced psychological distress during the past 30 days.

In 2012, 6.8 million people age 65 and over stayed in a hospital overnight at least one night during the year. Among this group of older adults, 11 percent stayed overnight 1 time, 3 percent stayed overnight 2 times, and 2 percent stayed overnight 3 or more times. This is approximately double the number of overnight hospital stays for the population age 45 to 64 who had 6 percent stay overnight 1 time, 1 percent stay overnight 2 times, and 1 percent stay overnight 3 or more times. Older persons averaged more office visits with doctors in 2012. Among people age 75 and over, 23 percent had 10 or more visits to a doctor or other health care professional in the past 12 months compared to 14 percent among people age 45 to 64.

In January-June 2014, 97% of older persons reported that they did have a usual place to go for medical care and only 2.4% said that they failed to obtain needed medical care during the previous 12 months due to financial barriers.

In 2013 older consumers averaged out-of-pocket health care expenditures of \$5,069, an increase of 35% since 2003. In contrast, the total population spent considerably less, averaging \$3,631 in out-of-pocket costs. Older Americans spent 12.2% of their total expenditures on health, as compared with 7.1% among all consumers. Health costs incurred on average by older consumers in 2013 consisted of \$3,347 (66%) for insurance, \$803 (16%) for medical services, \$730 (14%) for drugs, and \$188 (4.0%) for medical supplies.

Health Insurance Coverage

In 2013, almost all (93%) non-institutionalized persons 65+ were covered by Medicare. Medicare covers mostly acute care services and requires beneficiaries to pay part of the cost, leaving about half of health spending to be covered by other sources. About 54% had some type of private health insurance. Among non-institutionalized older adults, 7% had military-based health insurance and 6% were covered by Medicaid (Figure 8). Less than 2% did not have coverage of some kind.

Figure 8: Percentage of Persons 65+ by type of Health Insurance Coverage, 2013

Note: Figure 8 data are for the non-institutionalized older adults. A person can be represented in more than one category.

Disability and Activity Limitations

According to the U.S. Census Bureau's American Community Survey, some type of disability (i.e., difficulty in hearing, vision, cognition, ambulation, self-care, or independent living) was reported by 36% of people age 65 and over in 2013. The percentages for individual disabilities ranged from almost one quarter (23 percent) having an ambulatory disability to 7 percent having a vision difficulty (Figure 9). Some of these disabilities may be relatively minor but others cause people to require assistance to meet important personal needs.

Figure 9: Percentage of persons 65+ with a disability, 2013

Source: U.S. Census Bureau, American Community Survey.

Using limitations in activities of daily living (ADLs) and instrumental activities of daily living (IADLs) to measure disability, in 2012, 33% of community-resident Medicare beneficiaries age 65+ reported difficulty in performing one or more ADLs and an additional 12% reported difficulty with one or more IADLs. By contrast, 96% of institutionalized Medicare beneficiaries had difficulties with one or more ADLs and 83% of them had difficulty with three or more ADLs. [ADLs include bathing, dressing, eating, and getting around the house. IADLs include preparing meals, shopping, managing money, using the telephone, doing housework, and taking medication.] Limitations in activities because of chronic conditions increase with age.

Except where noted, the figures above are taken from surveys of the noninstitutionalized older adults.

Although nursing homes are being increasingly used for short-stay post-acute care, about 1.3 million older adults are in nursing homes (almost half are age 85 and over). These individuals often need care with their ADLs and/or have severe cognitive impairment due to Alzheimer's disease or other dementias.

Notes

*Principal sources of data for the Profile are the U.S. Census Bureau, the National Center for Health Statistics, and the Bureau of Labor Statistics. The Profile incorporates the latest data available but not all items are updated on an annual basis.

Age-adjusted estimates are used when available.

A Profile of Older Americans: 2014 was developed by the Administration on Aging (AoA), Administration for Community Living, U.S. Department of Health and Human Services.

AoA serves as an advocate for the older adults within the federal government and is working to encourage and coordinate a responsive system of family and community based services throughout the nation. AoA helps states develop comprehensive service systems which are administered by 56 State Units on Aging, 629 Area Agencies on Aging, 244 Tribal organizations, and 2 Native Hawaiian organizations.
